

Results from the Junior Mathematics Olympiad

A great way to start the new year is to pass on the news that we received right at the end of last term that Kuankuan Lin, who is now in Year 7, received a merit in the Junior Mathematics Olympiad paper.

Over 300,000 pupils started the challenge, with the top 1,200 taking the higher paper. For Kuankuan to only be a few marks off a distinction was a wonderful achievement, especially as the whole challenge was intended for pupils a year older than himself. All bodes well for the coming year, with hopefully even more of our pupils reaching the same giddy heights.
