

Dr Fox's Super STEAM Pre Prep Activity

This week, the children looked at pig organs including the heart, lungs, liver, kidneys and diaphragm. Wearing lab coats, gloves and safety specs the children squealed with delight, fascination and awe as they passed the organs around. Dr Fox taught them about blood flow and the functions of each organ and the similarities they have with human organs. The comments and questions flowed; they seemed particularly impressed at the size and weight of the liver as well as the smell and drops of blood!
