

Plastic Pollution

Hello my name is Elizabeth and I am here today to talk to you about plastic pollution. Many members of the public all over the world have been talking to their nations about plastic pollution but what they don't realise is that children are the ones that will have to deal with the situation. Generation after generation leave the problem of plastic pollution to their kids but I am here to cut this vicious cycle off at the source.

People don't stop and think about their actions. Oh one piece wont matter. It's just a tiny bit. Think about Newton's third law - every action has an equal and opposite reaction and this one is pretty dire. Each piece, each bin, each pile of plastic is slowly killing our earth. Our earth, our life and our problem. If we don't deal with it now we never will.

Don't leave a land of rubbish behind for the next generation, leave a land of care, kindness and cleanliness. Some of us just ignore the dilemma and hope it works itself out. Hoping isn't enough, we need to fix it and fix it now.

Yes maybe some of the population earn their living in plastic factories, but is this really as important as all the people, the animals and the world. To quote Spock ' The needs of the many outweigh the needs of the few.' Are grapes more important to you than the planet? Are potatoes? Are apples?

Ask yourself this question, if the answer is yes then you can leave here today without a care, but if the answer is no then come with me to save us, save our kids, save their kids and so on.

SAVE OUR WORLD!
