

Year 3 Science Topic - Teeth

Teeth was the topic of a superb presentation to Year 3 children by Dr Akhil Khanna this morning. We learnt about child and adult dentition, including the different types of teeth and their functions. We also learnt how to take care of our teeth properly, including regular visits to the dentist, brushing effectively and eating healthily. Dr Khanna told us about the effects of sugar on teeth, including tooth decay and extraction!

It was a fantastic presentation; the children listened superbly and were thoroughly engaged throughout. We are grateful to Dr Khanna for giving up his time to enrich our Year 3 Science programme.
