

Year 7 Science

In Science this week, Year 7 have been consolidating and building upon their knowledge of diffusion as part of their respiration topic. Using pom poms, stickers, chocolate, marbles and everything in between, they have made 3D models to demonstrate their understanding of diffusion and linked this to how gases are exchanged between the alveoli and the blood and between the blood and respiring cells. Here are some of examples by Emma, Alberto, Chloe and Gemma.

Before diffusion ...

After diffusion ...
